

Hello there!

My name is Paul Mikhailov, nice to meet you dear reader :)

This is my submission for the Additional Free TON Dev Experience Jury Contest.

I am a part of SVOI.dev development labs. Currently we are researching FreeTON potential to find out ways to create wonderful decentralized applications using this platform.

Before becoming part of SVOI.dev lab I've been working closely with Linux platform creating Debian-based distro with enhanced security for state power structures, developing packages for Debian, creating building environments and dealing with virtual machines (both software and hardware virtualization) and everything that goes with them (VM managers, networking, running them, controlling them and so on).

Projects I've been working on are under NDA, so can't discuss them freely.

Also I was a part of that team developed blockchain platform IZZZIO (<https://github.com/lzzzio/izzzio>).

Now I'm trying to participate in contests, my first try is Timer contract contest: <https://forum.freeton.org/t/contest-proposal-tick-tock-messages-aka-timer-smart-contract/4559/6?u=ftar> (proposal #2)

My technology stack:

- JavaScript, Node.js
- Python
- Solidity
- C/C++
- ASM (for RISC architecture, mainly for digital signal processors)
- A little bit of Rust :)
- Bash (and existing various packages for different purposes)
- KVM
- Ansible + OpenNebula + OpenVSwitch
- Linux

The Jury groups I want to join are:

- SDK Contests
- Toolchain Contests
- Smart Contracts
